

NAB's petition 04-160 should be thrown out. I subscribe to XM Radio and enjoy the ability to listen to uninterrupted music. I pay a fee for this service and feel it's well worth the price. The NAB is obviously nervous about a service that is far reaching and of greater quality than what a terrestrial broadcaster is limited to. XM listeners are going to listen to XM radio by default so adding the weather and traffic info probably won't have much of an impact on the broadcaster.
